8

Viewpoint: The changing policy environment for the 1990 farm bill

Don Paarlberg contends farmers must learn to play a new game in the agricultural policy arena

9

Mainstreaming low-input agriculture

Neill Schaller looks at the means and ends of achieving sustainability in the use of agricultural resources

13

Low-input, sustainable agriculture: Myth or method?

Charles W. Stenholm and Daniel B. Waggoner suggest that the challenge in the 1990s will be to strike a reasonable balance between competing interests and goals in sustainable agriculture

18

Agriculture's search for sustainability and profitability

John E. Ikerd discusses the tradeoffs between environmental stewardship and a productive, competitive agricultural industry

24

Policy proposals to foster sustainable agriculture

Chuck Hassebrook and Ron Kroese examine opportunities for the 1990 farm bill to foster development of sustainable farming systems

28

Social traps and incentives: Implications for low-input, sustainable agriculture

Jeffery R. Williams suggests that sustainable farming systems could be encouraged with incentives that break current social traps

31

Sustainable agriculture: Perspectives from industry

Five representatives of the agricultural chemical industry share their corporate views on the concept of sustainability

34

Sorting out the environmental benefits of alternative agriculture

Pierre Crosson and Janet Ekey Ostrov analyze the economic and environmental benefits of sustainable farming practices

42

Low-input agriculture and soil conservation

Klaus W. Flach says the objectives of sustainable agriculture and soil conservation can be compatible and complementary

45

Farm price distortions, chemical use, and the environment

Clayton W. Ogg looks at farm commodity program options that could benefit both farmers and the environment

48

Low-input agriculture reduces nonpoint-source pollution

Anne C. Weinberg outlines how state nonpoint-source management programs can promote use of low-input agricultural practices

51

Research approaches for ecological sustainability

Richard Lowrance says research on alternative farming systems, including chemical management, should aid the search for ecological sustainability

55

Specificity: The context of research for sustainability

D. T. Walters, D. A. Mortensen, C. A. Francis, R. W. Elmore and J. W. King suggest that agricultural operators today require farm- and field-specific information to manage chemical inputs

58

Research needs for sustainable agriculture

James J. Vorst reports on a series of meetings at which farmers and university researchers examined the direction that sustainable agricultural research should take

61

LISA: Some early results

J. Patrick Madden and Paul F. O'Connell review progress in the U.S. Department of Agriculture's new low-input, sustainable agriculture program

65

Practical applications of low-input agriculture in the Midwest

Charles A. Francis summarizes strategies farmers in the Midwest are implementing to sustain productivity and profitability while protecting the environment

68

Crop rotations: Sustainable and profitable

Roger L. Higgs, Arthur E. Peterson, and William H. Paulson take a new look at the time-tested benefits of crop rotation

71

Low-input farming systems under conservation compliance

Dana L. Hoag and Kevin E. Jack examine how the new conservation compliance provisions can affect adoption of sustainable farming systems

75

Sustainability of dryland cropping in the Palouse: An historical view

Michael D. Jennings, Baird C. Miller, David F. Bezdicsek, and David Granatstein discuss sustainability in one of the nation's most fragile agricultural regions

81

Perennial grain: New use for intermediate wheatgrass

Peggy Waggoner outlines research at the Rodale Research Center on developing wheatgrass as a perennial grain crop

Journal of Soil & Water Conservation

To advance the science and art of good land and water use worldwide

83

Sustainable agriculture at work

Carey L. Draeger tells how a new Michigan program is helping farmers and forest producers conserve energy and natural resources

86

Commodity programs and sustainable cash grain farming

Bruce E. Lyman, Richard A. Levins, Michael A. Schmitt, and William F. Lazarus analyze the common dilemmas that cash grain farmers face in adopting sustainable farming methods

Commentary

89

Sustainable agriculture: Who will lead?

Fee Busby says that solutions to today's agricultural problems require that people have the freedom to think and act on their thoughts to solve local problems

91

An open letter to the agricultural community on defining sustainability

Rick Williams contends that sustainability cannot be defined only in measurable parameters, but involves diversity of involvement, thought, and action

93

The flexibility of sustainable agriculture

Wilson Scaling suggests that practical resource management offers producers the flexibility to reduce costs, meet consumer demands, increase profits, and aid the environment

94

Agriculture's role in protecting water quality

Susan Offutt says that farmers ultimately will be responsible for changing production practices to avoid contaminating ground-water and surface water

96

Converting to pesticide-free farming: Coping with institutions

Jim Bender outlines obstacles that farmers face in eliminating use of agricultural chemicals

98

Wildlife and fish and sustainable agriculture

Ann Y. Robinson says low-input, sustainable farming practices offer the promise of better wildlife habitat

Research reports

115

Nitrogen status of corn after alfalfa in 29 Iowa fields

N. M. El-Hout and A. M. Blackmer

117

Soil physical properties after 100 years of continuous cultivation

S. H. Anderson, C. J. Gantzer, and J. R. Brown

121

Farming systems' influences on soil properties and crop yields

D. H. Rickerl and J. D. Smolik

125

Tillage and clover cover crop effects on grain sorghum yield and nitrogen uptake

R. G. Lemon, F. M. Hons, and V. A. Saladino

128

Spatial dimensions of farm input intensity: A pilot study

Abram Kaplan and John Steinhart

132

Factors affecting farmers' use of practices to reduce commercial fertilizers and pesticides

Paul Lasley, Michael Duffy, Kevin Kettner, and Craig Chase

137

Sustainable production from the Rough Fescue Prairie

Johan F. Dormaar and Walter D. Willms

140

The potential for LISA-type nitrogen use adjustments in mainstream U.S. agriculture

Jay Dee Atwood and S. R. Johnson

144

Reducing field losses of nitrogen: Is erosion control enough?

Fritz M. Roka, Richard A. Levins, Billy V. Lessley, and William L. Magette

148

Simulated effects of rapeseed production alternatives on pollution potential in the Georgia Coastal Plain

D. L. Thomas, M. C. Smith, R. A. Leonard, and F.J.K. daSilva

154

The economic impact of conservation compliance on northern Missouri farms

Nyle C. Wollenhaupt and Melvin G. Blase
